

GraniteCrete™ or TerraPave™?
The GraniteCrete™ Advantage

Cost: GraniteCrete™ is \$1.82 a sq.ft. for product, Terra Pave™ is \$3.80 a sq.ft. for product.

Porosity: Terra Pave™ is not porous, GraniteCrete™ is porous.

Ease of getting product/installation: Terra Pave™ has to be produced the vast majority of the time **off site** using a pug mill and liquid injector system (unless somebody has their own) **and transported to the location** for installation. GraniteCrete™ can easily be mixed directly at the site with consistency bag for bag.

Consistency/Finish: Terra Pave™ has a looser finished surface. GraniteCrete™ has a firm, durable, permanent surface.

Outdoor Temperature: Terra Pave™ can only be installed in 60 degree weather or above. GraniteCrete™ can be installed in any outdoor temperature above 33 degrees.

Rain Tolerance: Terra Pave™ cannot be installed if rain is expected within 5 days. GraniteCrete™ can be installed with a 1 day gap.

Waiting Time: GraniteCrete™ can be walked on the same day (but no heavy machinery for 5 days). Terra Pave has a 2 to 3 day waiting period before it can even be walked on.

Permanent, Permeable, Natural.
GraniteCrete™ is superior.
